Bringing it All Together: The Vital Role of Tank Terminals in the Energy Transition

The oil, gas and chemicals industry is undergoing an energy transition from fossil-based fuels to renewable sources of energy, including solar, wind, hydrogen, and biofuels. As multi-modal hubs, tank terminals will play a crucial role in providing the storage and logistics expertise that will enable supply chains of these new, low or no carbon liquid fuels—just as they do in today’s markets of liquid fuels based on petroleum. ILTA is pleased to present a panel of thought leaders leading the way in our growing understanding of the work needed to make a lower carbon future a reality.

While the speed of this transition is hard to predict, the increasing demand for cleaner energy is apparent. Today, companies are investing in new technologies to support demand for reducing carbon emissions. To support these emerging sectors, it will be critical for companies to adapt, pivot, and develop cost-competitive clean fuel solutions.

This panel will focus on the impacts of the energy transition on our industry, examine the renewable and sustainable sectors where companies are investing, and explore how companies are responding to support our industry’s transformation.

Additional speakers will be added closer to the session date.

- Caitlin Geisinger, Burns & McDonnell Engineering (Moderator)
- Laura Goldberg, Future Houston
- Jonathan Lewis, Clean Air Task Force
- Jason Hetherington, Burns & McDonnell

PLEN TUESDAY

● 6/14/2022 | 9:00 a.m. - 9:45 p.m.
(Texas Ballroom D+E)

Highlights of Progress on ESG Commitments

In this plenary session, conference participants will hear how leading organizations in our sector are delivering on their commitments to environment, social, and governance objectives. Each speaker will share highlights of their most notable accomplishments and their plans for next steps, as well as offer advice to other ESG professionals on how they can maximize the success of their own ESG initiatives.

Additional speakers will be added closer to the session date.

- Rich Byrnes, Port Houston
